PROFESSIONAL PROFILE

Senior Software Developer with over 35 years of experience, including 14+ years in the healthtech sector building and maintaining Electronic Medical Record (EMR) platforms used by thousands of clinical professionals across the United States. Currently architecting FHIR-based microservices with GraphQL, leading third-party system integrations (Klara, EHR platforms, and payment systems), and automating clinical data pipelines using PowerShell and SQL Server at Modernizing Medicine. Brings deep expertise in .NET/C#, clinical database architecture, HL7/FHIR integration, API development, and agile delivery — with a consistent focus on interoperability, HIPAA compliance, and measurable impact on healthcare workflows. Fluent English speaker with daily professional communication in a fully remote U.S.-based environment (C1).

PROFESSIONAL EXPERIENCE

Senior Software Engineer | **Modernizing Medicine** — Boca Raton, FL (Remote)

December 2017 – Present • Sprint 14.5 (Scrum)

- Architect and develop FHIR-based microservices using GraphQL to extract clinical data from SQL Server and feed it into HL7/FHIR-compliant systems, enabling full interoperability with external healthcare platforms.
- Built and maintain automated PowerShell scripts that extract, analyze, and synchronize data from SQL Server to FHIR endpoints, running as scheduled production jobs with zero manual intervention.
- Develop and maintain critical modules of the gGastro EMR platform, used by over 14,000 specialists across the U.S., using C#, .NET, PL-SQL, and SQL Server.
- Implemented clinical data persistence improvements, reducing patient record load times by 30% and increasing overall system responsiveness.
- Manage local development environments using Docker Compose; collaborate with DevOps team on Kubernetes-based production deployments.
- Write and maintain unit tests using NUnit and validate API endpoints with Postman and Bruno, ensuring reliability across all services.
- Led end-to-end integration of 2 major third-party clinical platforms — Klara Balance (patient communication) and mmPay (credit card & check payment processing) — through a microservices architecture with FHIR, REST APIs, and GraphQL, managing 20+ FHIR endpoints and enabling seamless data exchange across the full care ecosystem.
- Troubleshoot production issues directly on IIS servers and SQL Server databases for enterprise clients, providing rapid resolution in mission-critical environments.
- Participate in full Scrum ceremonies (Daily Standups, Sprint Planning, Reviews, Retrospectives) using Jira for backlog and sprint management.
- Ensure HIPAA compliance throughout all development and data handling stages.

Software Engineer | **Gmed** — Weston, FL

June 2010 – December 2017

- Developed features for the gCare EMR system focused on electronic health record management using C#, .NET, and PL-SQL on SQL Server.

- Optimized complex SQL queries on high-volume clinical databases, improving critical report performance by 40%.
- Implemented modules for patient data entry, clinical notes, and medical episode tracking with high reliability and full auditability.
- Collaborated with QA and clinical support teams to maintain regulatory compliance and system stability.

Project Manager / Tech Lead | C.T.P. – Gmed — Caracas, Venezuela

April 2006 – June 2010

- Led a team of 6 developers across the full application development lifecycle: planning, design, coding, testing, and deployment.
- Designed relational database models for clinical applications and user interfaces in .NET/C#.
- Reduced feature delivery time by 25% through process standardization and adoption of agile methodologies.

Development Manager | Visión Grupo Consultores — Caracas, Venezuela

August 2000 – 2006

- Managed development of Strategos, Satec, and Vernier — enterprise strategic planning and management control platforms.
- Architected web solutions using Java (JSP, J2EE, Hibernate, Struts) with SQL Server, Oracle, and PostgreSQL backends.

KEY PROJECTS

gPM — Practice Management Module | Modernizing Medicine —

8+ years as lead developer

- Serve as the primary developer and maintainer of gPM (Practice Management), one of the core modules of the gGastro EMR platform, handling scheduling, billing, and clinical workflow management for thousands of specialist practices across the U.S.

Microservices Modernization | Modernizing Medicine —

Delivered in 6 months

- Led the full migration of legacy monolithic services to a modern microservices architecture using FHIR, GraphQL, and REST APIs — completing the project on schedule within 6 months and significantly improving system scalability and maintainability.

Statements Module — Development & Deployment | Modernizing Medicine —

Full lifecycle

- Developed and deployed the Statements module from scratch, managing the complete rollout to all client practices — including design, testing, and production deployment across the full customer base.

TECHNICAL SKILLS

Languages: C#, Java, PHP, JavaScript, PL-SQL, PowerShell, Bash, Visual Basic	DevOps & Tools: Docker Compose, Git, GitHub, Jira, IIS, Postman, Bruno, NUnit, Visual Studio
Frameworks & APIs: .NET / .NET Core, GraphQL, REST APIs, ASP, J2EE, Hibernate, Struts	Cloud & Infra: AWS (basic), Kubernetes (production env.), IIS server administration

Clinical Standards: HL7, FHIR (development & integration), HIPAA compliance, EMR / EHR systems	Methodologies: Scrum (Sprints, Daily, Planning, Retro), Kanban, Agile delivery
Databases: SQL Server, Oracle, PostgreSQL, MySQL, DB2, Informix	Frontend: HTML5, CSS3, JavaScript, AJAX

EDUCATION

B.S. in Systems Engineering — Alejandro Humboldt University, Caracas

2010

B.S. in Business Administration (IT Concentration) — Simón Rodríguez University, Caracas

2001

Postgraduate: Technology Management — Santa María University, Caracas

1998

Associate Degree in Computer Science — Instituto Universitario de Venezuela, Caracas

1993

CERTIFICATIONS & CONTINUING EDUCATION

Everyday AI: Concepts & Applications — LinkedIn Learning — Mar 2026

MongoDB Essential Training — LinkedIn Learning — Apr 2024

Microservices: Design Patterns — LinkedIn Learning — May 2022

Microservices Foundations — LinkedIn Learning — May 2022

SQL Server 2012: Designing Database Solutions — LinkedIn Learning — Feb 2021

C# Best Practices for Developers — LinkedIn Learning — Aug 2020

AWS Technical Essentials — Amazon Web Services (AWS)

Oracle PL-SQL Database Programming 7 — Oracle Venezuela — 1993

LANGUAGES

Spanish: Native **English:** Professional working proficiency (C1) — daily use in U.S.-based corporate environment
